

# OPEN SAFE FLORIDA

Is the state effectively containing the novel coronavirus ("COVID-19")?  
Data current as of July 6, 2020

## STATUS: **RED**

COVID Exit Strategy ([www.covidexitstrategy.org](http://www.covidexitstrategy.org)), a non-partisan group of public health and crisis experts, has been tracking the progress states have made towards meeting the CDC recommended benchmarks states should reach before reopening their economies. On July 6<sup>th</sup>, 2020, only three states were meeting these metrics, earning a "Green" rating. Currently, Florida is failing most of the benchmarks, and is rated "Red" by COVID Exit Strategy.

### CDC Benchmark: a 14-day decline in newly diagnosed COVID+ cases

The CDC recommends a state show a 14-day decline in new cases of COVID-19 before reopening. Florida has **NOT MET** this benchmark. COVID+ cases have been increasing in the state over the last 14 days, with the 7-day moving average for daily cases approaching 9,000.

Florida - Last 60 days of new COVID+ Cases with 7-day Trend

## CDC Benchmark: declining ILI

The CDC recommends a state show a 14-day decline in hospital & outpatient visits for influenza-like illness (“ILI”) before reopening. Florida has not reported ILI data to the CDC for over two months, making this metric impossible to evaluate for the state.

## CDC Benchmark: testing

The CDC recommends a state show a downward trajectory for the percentage of COVID-19 tests that are positive before reopening. Florida has **NOT MET** this benchmark. Test positivity has been increasing in the state over the last 14 days.

## CDC Benchmark: hospital capacity

The CDC recommends a state have sufficient hospital capacity to treat all patients without crisis care (20% capacity available over last 7 days). Florida **HAS MET** this benchmark. The highest reported occupancy in the last week was 71% for inpatient and 68% for ICUs, and daily hospitalizations have been trending upward.

# Recommendations

Florida is currently failing 3 out of 4 the CDC benchmarks that FCAN has been tracking, indicating that COVID-19 has been spreading in the community without effective containment. FCAN recommends that the state maintain all current restrictions related to COVID-19, and take additional measures to improve containment. These measures could include: a statewide face-covering mandate for public indoor spaces, prohibiting indoor seating at restaurants, and closing all non-essential businesses in current COVID-19 hot-spots if current trends continue.
