

# FILEFOX™

ACH Editor on Steroids

## No More ACH File Errors!

Reduce costs associated with returned, problem ACH files.

Create ACH files even if the online bank system is down.

If your customer is unable to send you ACH Files because the online banking system is down, FileFox can create the ACH files from CSV, or Excel spreadsheet formats.

Let us show you how?

**FileFox** is a full-featured ACH Editor with a wide array of tools for composing, editing, repairing, searching, manipulating and validating ACH files -- while **FileFox Viewer** enables secure ACH file sharing with your customers and bank staff with no editing capabilities. **FileFox Editor** and **FileFox Professional** are all you need, to have valid NACHA formatted ACH files easily.

When you have invalid formatted ACH files with NACHA violations, you can expect rejections and returned files, causing you lost time, admin fees and additional staff involvement for correction. Take control of your ACH files, stop returned problem files and fees with clean, validated ACH files quickly and hassle-free with Laru Technologies FileFox.

FileFox is a full-featured ACH Editor with a wide array of tools for composing, editing, repairing, searching, manipulating and validating ACH files.

FileFox makes it easy to exchange data with other people and applications. Import ACH data from spreadsheet applications and automatically convert it to NACHA format. Repair minor errors that frequently appear in files produced by end-user programs.

Once your data is in NACHA format, FileFox gives you a suite of tools to validate and verify the data. Perform an OFAC sweep of an IAT file. Check all routing numbers against the Federal Reserve Bank's ACH routing directory. Even write your own custom rule to validate ACH file content against business rules.
